Basic Guide to make a Imaged Jump in Google Docs or AKA The Lazy Imaged Method

First off, let's make a **Table**, go into **Insert** and click the **fifth** option and click the **top leftmost box**. It should result in something like this.

Ah, but that's boring isn't it? Just a little white box. Well you can easily fill it if you want, but let's make it fancier shall we?

Let's begin by **right clicking** on the table and choosing **"Table Properties"**. It should be **fourth** from the bottom. The only parts you need to worry about are Cell Background Color, Border Color, and Border Width. For explanation purposes, I shall make a simple Green and Blue pattern.

If done correctly, it should look like below. Find a good combination of colors that are easy on the eyes, or if you want a dark theme, make sure that the text is easily visible.

Like So.

Now, let's move on to overall background color, this one took me a bit longer to figure out on my own but it's as simple as going into File and clicking **"Page Setup"**. From there you can easily change the color of the page.

Now, let's move onto images, you can either use the Insert Tool, it's literally the first option, or Drag and Drop the image from another tab.

Ultimately the hardest thing I find is formatting things so they all fit properly.

This was Malbutorius, on how I make Imaged Jumps in one of the laziest and easiest ways I know of. Both Magicka and Panty and Stocking with Garterbelt were made in this way. No need for serious talent, no need for learning how to use potentially complicated systems, other than one or two minor things everything else is just your own personal style. Party on dude.
